DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-28 and 45-59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jewell et al (US6359920) in view of Ishikawa (US5841152).

With respect to claims 1-28 and 45-59, Jewell et al disclose a VCSEL (100) comprising an active region (110) further comprising at least one quantum well (126, 128) of GaAsSb having a depth of 40meV (Fig.2b) and further including GaAs barrier layer (54') sandwiching said at least one quantum well and GaAs confinement layer (70') sandwiching said active region and nitrogen to be used at least 1% in group V of semiconductor material in the active region. Jewell also disclose alternative substitution elements such as In, Al, N, Sb with the basic material GaAs and the quantum well is up to and including 50 Å, note col. 5 line

24 to col. 37 line 18, see figures 1-11. However, Jewell do not disclose the quantum well depth is defined as the difference between a valence band offset and a conduction band offset. Ishikawa teaches the quantum well depth is defined as the difference between a valence band offset and a conduction band offset (col.5, l.13-15). For the benefit of calculating the quantum well depth, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Jewell the quantum well depth is defined as the difference between a valence band offset and a conduction band offset as taught by Ishikawa.

Conclusion

Responding on the remark filed on 07/28/2004 for reconsideration, the examiner maintains the rejection mailed on 12/19/2003.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened

statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
